

MolProbity Ramachandran analysis

3kbh.H.pdb, model 1

1. The following table lists the number of residues in each category of the Ramachandran plot. The total number of residues is 1000. The number of residues in each category is given in parentheses. The number of residues in each category is given in parentheses. The number of residues in each category is given in parentheses.

Category	Number of residues
General case	1000
Isoleucine and valine	1000
Pre-proline	1000
Glycine	1000
Trans proline	1000
Cis proline	1000
